We appreciate your time

Taking development to  
the next level

# About Us

---

For 5+ years our team has been supporting and creating digital solutions for our clients from more than 30 countries all over the world. About 70% of our clients are regular and have already earned more than 40 million \$ using our services. When you trust us your ideas we bring them into life in the form of profitable products.

# Our services

---

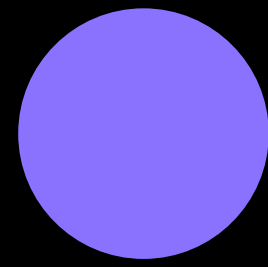

## Web Development

We provide a full-cycle of design and web app development.

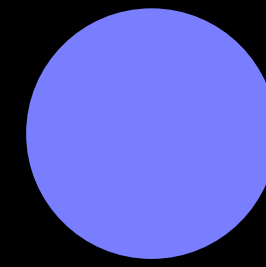

## Mobile Development

We develop hybrid and native mobile applications.

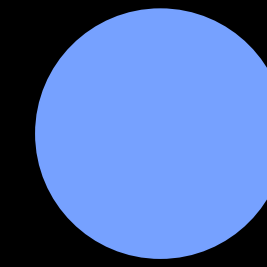

## UI/UX Design

We design and prototype according to cutting-edge UI/UX standards.

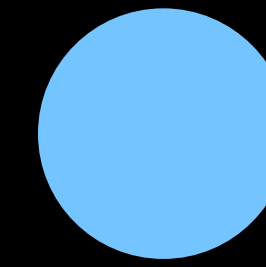

## QA

All products are tested in the QA department.

## Project Management

Each project has its own manager who controls the budget, deadlines and progress of the team at each stage.

## Project Audit

We make an independent estimate of the project status and all its parameters.

# Key spheres

---

## Travel Portals

Our experience in this field ranges from making a simple travel agency website to global travel portal development.

## Chatbot Apps

We are experts on chatbot architecture design and development, chatbot UI development, and AI and machine learning integration.

## Social Networking

We are not just a social networking website development company but an expert in social networking development.

## Healthcare Software

Our developers are experienced with complex healthcare systems, such as EMR software development projects.

## SaaS

The SaaS applications built by our company range from CRM and project management systems to B2B marketplace platforms and virtual tour software.

## Adtech Software

Building a dashboard that you can use to monitor the statistics or a custom advertising network to monetize the digital projects of your partners - We can accommodate a wide variety of requests.

## POS Software

We have been among the first POS development companies that focused on cross-platform POS system development so that the app support is not limited to a single POS terminal.

# Technology map

---

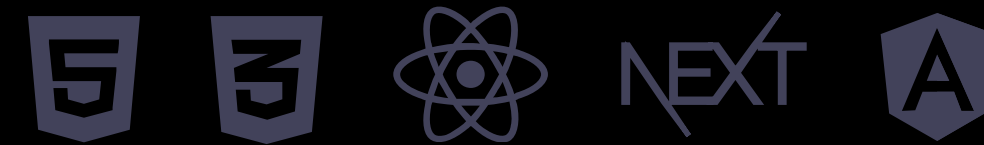

## Languages

- Javascript, Typescript, Python

## Web Frontend

- HTML, CSS/SASS, Reactjs, Nextjs, Angular

## Backend

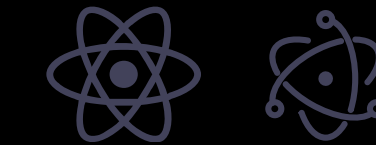

- Nodejs, Expressjs, Nestjs, Flask, Django

django

## Mobile & Desktop Frontend

- React-Native, Electron

## Databases

- PostgreSQL, MySQL, MongoDB, Redis

## Cloud & Devops

- AWS, Google Cloud, Microsoft Azure, NGINX, Docker, Kubernetes

## QA

- CodeceptJS, Selenium, Cucumber, Allure, Puppeteer

## Design

- Figma, Adobe Suit, Invision, CorelDraw

# Engagement model

---

## 1. TIME AND MATERIAL/ HOURLY BASIS

Project is delivered on a standard basis, payments conducted according to actually spent hours, more flexible than fixed budget. Particularly good for openended, long term projects where it is hard to make a solid estimation of required efforts or there is a need to constantly add new features.

*Hourly basis model will be flexible and we can change requirements on the go (we don't need low-level specification and can start directly from the design creation).*

*In this case, the development process will be shorter.*

## 2. FIXED PRICE

Project is delivered on a standard basis for fixed price. Used for projects with clear, detailed software requirements, specifications and agreed timeline for the project completion. Price is fixed according to the preliminary agreement.

*With Fixed Price model the process is strict and we need to go through all stages without the ability to change requirements after design stage.*

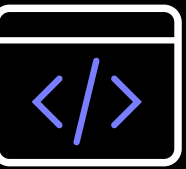

# Our approach

---

## 1. ACQUAINTANCE WITH THE PROJECT

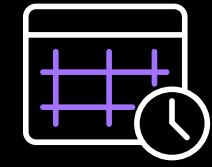

First of all, we try to get as much information on a project or features to be implemented as possible. As a result, we form a common perspective of a project and prepare a preliminary rough estimate of budget and time needed. We set questions and suggest possible solutions.

## 4. DEVELOPMENT

First of all, we focus on your business prior tasks development.

Development process is transparent, so at any moment you may receive access to the code through the version control system GIT or to observe the progress on the Gantt diagram.

## 2. PLANNING

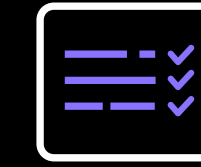

When all the necessary information is received and solutions are agreed, our specialists form requirement specifications or develop prototypes, divide the development into stages (sprints).

## 5. TESTING

Automated testing — our developers write automated tests, thus check that the code is operating according to the requirements. Afterwards these tests help to apply new functionality without breaking the previous one.

Manual testing - QA engineers check the product operability in all browsers and on all devices.

## 3. ESTIMATION

After the project is split up into stages we can give precise evaluation for each of them.

## 6. LAUNCHING

At this stage we help to launch a project. We configure server and database operation, set up automated deployment and configuration of an app on servers.

# Reviews

*"They've taken great effort to understand the business model to ensure the technology is best suited to our needs."*

Fusion Tech brought an increase in the client's downloads and positive reviews on the app store. They have an excellent workflow that resulted in a neat platform. So far, the client looks forward to seeing it work well with their end clients.

 **CEO & Founder,  
SitterTree**

*"Their developer has absolutely exceeded our expectations in speed of execution and skill."*

I review his code regularly, and it has been consistently high quality and delivered quickly. We also have been so grateful for the input from our project manager as we evaluate designs. She is proactive in identifying potential usability issues, and she has on many occasions provided excellent suggestions or input that make it clear that she is thinking through the full user experience of our product.

 **Ann Baum, CEO and  
Co-founder, Spillt**

*"They're very reliable. Fusion team is very committed to sticking to timelines."*

Thanks to the efforts of the Fusion Tech team, the company was able to get attention at their EuroShop exhibit. The company was able to secure new partnerships, started with first investor talks, and received feedback from potential customers.

 **CEO, EverStore**

*"I can trust their developers to simply handle it or figure out a way."*

Fusion Tech has demonstrated a high level of technical excellence. Their skilled and collaborative nature has tripled the speed of the client's progress with their product. The client can expect to see a positive ROI, especially pertaining to some of the solution's core features.

 **Co-Founder &  
Technical Architect,  
CloudPano**
